Development of the location aware platform on wobini.ch

Goal

This project is about developing a mobile software for users to locate themselves and send their position online on wobini.ch to share it.

Idea

Have you ever noticed most of our mobile phone calls start with : "hi, where are you?". This service gives an alternative way of answering the question. Friends and families can share their current and past locations online.

Functionalities

- Localization with a mobile phone application (J2ME)
- Possibility to geolocate with GPS
- Queue locations on the phone
- Store and view locations on wobini
- Export KML files (google earth)

Context

Wobini is a playground project developed by Liip, a swiss agile web development company.
